NOTE.—A seasonable month, with temperatures and rainfall about normal. Cloudy skies were frequent, and moderate northerly winds prevailed. Total bright sunshine, 140 hours, and 5 sunless days. Earth temperatures during the month rose at 1 ft. from 53·2° to 60·0°, and at 3 ft. from 55·0° to 58·6°, while the mean at the former was 56·1° and 56·0° at the latter depth. Thunder occurred on the 9th. Mean dew-point, 49·0°; mean elastic force of vapour, 0·348 in.; and mean relative humidity, 81 per cent. of saturation.

SUMMARY FOR OCTOBER.

The month was one of seasonable weather, for although dull skies were frequent, both precipitation and temperature were about the normal, the greatest positive difference in the former was accounted for in the southern extreme of the South Island, this owing to the heavy rains on the 29th and 30th.

None of the atmospheric disturbances were of remarkable intensity such as to cause storms of a severe character.

Westerly areas of low pressure passed in the south on the 3rd, 8th, and 16th, and immediately following these dates cold southerly winds were experienced. The strongest southerly, however, in the east coast districts occurred on the night of the 18th in connection with a depression centred off East Cape, and between the 15th and the 19th of the month conditions were generally very unsettled.

Meteorological Office, Wellington, 26th November, 1913.
