SUMMARY FOR THE MONTH OF NOVEMBER, 1917.

Anticyclonic pressure predominated during November, accounting for fine and bright weather generally.

Only two disturbances of any intensity were in evidence.

On the 6th a westerly depression passed rapidly in the South, bringing boisterous and wet conditions along the west coast south of Cape Egmont.

Between the 19th and 23rd an ex-tropical disturbance ruled in the North, and during this period high south-east winds and dull wet weather prevailed over the North Island and in the north-east portion of the South. The latter disturbance was responsible for some heavy rainfall along the east coast of the North Island, causing floods in some of the rivers on the 22nd.

Except at a few stations in the latter district, precipitation was everywhere below the average.

D. C. BATES, Director.
