SUMMARY FOR THE MONTH OF AUGUST, 1919.

During the month of August the total rainfall exceeded the average in the southern half of the South Island and in the Hawke's Bay and Gisborne districts of the North Island, while elsewhere it was generally deficient. Precipitation was usually of a showery nature, but fairly general rains occurred about the 1st, between the 15th and 17th, and from the 28th to the close of the month.

Disturbances were somewhat frequent and chiefly of a westerly type, with lowest pressure passing south of the Dominion. The most notable depression, however, was a cyclone which apparently developed off the New South Wales coast about the 25th, and came within effective distance of the Dominion on the 28th. Its centre passed down the west coast of New Zealand between the 28th and 31st, and on the morning of the latter day was located off Puysegur Point. During this period stormy conditions were experienced in many parts. Anti-cyclones were in evidence at various times, but owing to their centres passing too far north or south they were never favourable to settled conditions over the Dominion as a whole. Though brief periods of fair weather were experienced in different parts, the weather generally was of an unsettled nature.

B. V. PEMBERTON, Acting-Director.
