NOTE.—A mild winter month, with barometric pressure, temperatures, and sunshine above the mean, and precipitation 27 per cent. below the mean of previous years. Total bright sunshine, 177 hours 55 minutes, 55 per cent. of the possible, and three sunless days. The maximum atmospheric pressure for the month was 30.511 in. on the 25th, and the minimum 28.902 in. on the 5th. A heavy thunderstorm occurred on the 4th, fog on the 22nd, and hail fell on the 2nd, 4th, and 7th. Frost was recorded on the grass on eleven mornings. Mean earth temperature at 1 ft. was 47.7°, and 50.6° at 3 ft. Mean dew-point, 42.2°; mean elastic force of vapour, 0.269 in.; and mean relative humidity, 78 per cent. of saturation.

SUMMARY FOR THE MONTH OF AUGUST, 1921.

During the first week of August an intense and extensive Antarctic storm was responsible for high westerly winds and unsettled boisterous conditions. On the 4th and 5th atmospheric pressure as low as 28.60 in. occurred in southern parts of the South Island.

Thunderstorms were frequent while the storm lasted, and on the night of the 4th a severe one was experienced at Wellington.

With the change of wind to southerly, about the 6th, snow fell in many parts of the South Island and on high levels in the North.

The middle and end of the month proved somewhat unsettled on account of small depressions to the southward of New Zealand, but, except during the first week, the weather generally was under anticyclonic control, and proved very favourable for a winter month. Rainfall, however, was deficient over most of the Dominion, above-average totals only being recorded in the West Coast and southern districts of the South Island, and at a few westerly stations in the North.

D. C. BATES, Director.
