SUMMARY FOR THE MONTH OF MARCH, 1923.

The early part of March was anticyclonic in character, fair weather prevailing generally until the 13th. The remainder of the month, except for short fair-weather intervals, was unsettled under the influence of various depressions passing in the South. Of the latter the most notable, an intense and extensive one ruling between the 14th and 19th, was responsible for strong west to south-west winds and rain in many parts. On the 16th the barometer fell as low as 28.95 inches at the Bluff.

The total rainfall was above the average in the northern and southern portions of the South Island and also at scattered stations on the West Coast; elsewhere it was mostly below, the largest deficiencies occurring in the East Coast districts.

D. C. BATES, Director.
