SUMMARY FOR THE MONTH OF OCTOBER, 1924.

October was characterized mainly by dull and warm weather. It was remarkable for the end of the protracted dry period which had been experienced, particularly in the east coast districts of the South Island. Warm, beneficial rains occurred several times during the month, but snow fell on several occasions on the higher levels, particularly in the rear of a cyclonic storm about the 20th.

On the last two days general heavy rains were again experienced, resulting from a disturbance which moved up the West Coast. Floods occurred about this time in various parts of the North Island.

During the month there were six areas of westerly low-pressure and four ex-tropical disturbances. As a consequence, atmospheric conditions were very unsettled, and there were very few days on which the weather was fine over the whole Dominion.

The aggregate rainfall was above the average in nearly all parts, only a few places in Otago and the Bay of Plenty reporting a deficiency. Most of Canterbury experienced over double its mean.

D. C. BATES, Director.
