

On the 5th an intense depression of the westerly type brought heavy rain to the western districts and central highlands of the South Island. Northerly gales were experienced from Cook Strait southwards.

Conditions remained rather unsettled until the 12th. Between the 8th and 12th another rather intense depression passed, culminating in the development of a cyclone off East Cape. On the 8th and 9th northerly gales blew, that on the 8th being very heavy and doing much damage in Christchurch. From the 10th to the 12th there were south-westerly gales with heavy rains in most districts and low temperatures. Snow fell on the high country, and hail in places. Strong southerly winds and cold showery weather continued between Napier and East Cape till the 15th, the rain being particularly heavy at East Cape.

The fine and warm spell to which reference has already been made followed the unsettled period of the first half of the month. On the 25th, however, a fairly intense cyclone approached from the Tasman Sea and crossed the Dominion during the following two days. The passage was accompanied by good general rains, especially on the 26th, which were of great benefit to the country. Cool south-westerly set in on the 27th as the cyclone passed, but the storm was losing intensity, and the cold snap proved of only slight severity.

The remainder of the month was mainly fine with moderate temperatures.

EDWARD KIDSON, Director.
