

At Upper Moutere, 8·19 in. were recorded, and the resulting floods were the heaviest ever experienced. The railway-line was damaged in several places and motor traffic was interrupted. In the district about Woodville, Pahiatua, and Waipukurau also, there were severe thunderstorms and heavy downpours. Conditions remained rather disturbed until the 12th. On that day, a cyclone centre passing north of North Zealand, caused southerly gales in North Auckland.

On the 19th a cyclone which seemed likely to bring good rains to the Dominion appeared in the North Tasman Sea. Unfortunately, it took a northward course and passed between New Zealand and Norfolk Island on the 20th. Some rain fell in the northern and western parts of the North Island, Taranaki and the Wanganui and Manawatu districts experiencing some heavy falls. Luckily for the Easter holiday-makers most of the rain fell during the night.

On the 24th another cyclone of considerable intensity developed near Tasmania. Pressure was again high to the east of New Zealand and, as in the beginning of the month, the storm made slow progress towards New Zealand and lost intensity. However, while it was crossing the Dominion on the 28th, northerly winds brought very warm and sultry weather, and conditions became favourable for rain when the southerly set in. On the 29th the depression developed a secondary centre west of the North Island. This crossed the Dominion and finally died out on the 30th. By that time general rains had fallen, with many heavy falls from Nelson and Marlborough northwards. These came for the most part on the night of the 28th and on the 29th and were accompanied in places by thunderstorms. At Auckland the lightning was particularly severe, and a house in Remuera was struck.

EDWARD KIDSON, Director.

#### CLIMATOLOGICAL TABLE.

##### MEANS AND TOTALS FROM CHIEF STATIONS.

April, 1930.

Altitude above sea-level.	Name of Station and Observer.	Extremes.				Total Rainfall (100 Points to the Inch).	Days with Rain (1 Point or more).	Altitude above sea-level.	Name of Station and Observer.	Extremes.				Total Rainfall (100 Points to the Inch).	Days with Rain (1 Point or more).
