## Example of Working.

Conversion as from 15th December, 1933, of 6 per cent. securities for £100, maturing 14th January, 1947, into 41 per cent. securities.

Interest rate on existing securities (as reduced by Part I of the Act) is 45 per cent. per annum.

P						£
One year's interest on	£100 at	existing r	ate (4‡ p	er cent.) is	 	$4 \cdot 8$
One year's interest on	£100 at	new rate	(4 <del>1</del> per c	ent.) is	 	$4 \cdot 25$
Difference is					 	<b>£0.55</b>

Period from date of conversion (15th December, 1933) to existing maturity date (14th January, 1947) is 13 years 30 days, counted as 13 years.

Factor for 13 years is 9.761556.

 $\pounds 0 \cdot 55$  multiplied by  $9 \cdot 761556$  is  $\pounds 5 \cdot 3688558,$  or  $\pounds 5$  7s. 4d., which is the premium for £100 of the existing securities.

The premiums on other amounts of existing securities of the same class can be computed in the same way, or alternatively, by ascertaining  $5\cdot 3688558$  per cent. of the amount of the principal in each case.
