Wheat, Oats, and Barley.—Estimated Yields.

Census and Statistics Office,
 Wellington, 7th February, 1934.

THE following estimated average yields per acre of wheat, oats, and barley for the season 1933-34 have been compiled from reports furnished by Stock Inspectors of the Department of Agriculture throughout the Dominion, and are now published for general information.

District.	Wheat. Bushels per Acre.	Oats. Bushels per Acre.	Barley. Bushels per Acre.
North Island ..	29	36½	42
Nelson ..	15	19	27
Marlborough ..	27	37	33½
Canterbury ..	29	39½	31
Otago ..	31½	36½	33½
Southland ..	37	44	43
Average (estimated) for the Dominion ..	29½	39½	33

The above estimates may be compared with last season's actual average yields, which were: Wheat, 36.54 bushels; oats, 44.16 bushels; and barley, 34.34 bushels.

In accordance with the above estimates, the total yield of wheat for the season 1933-34 should be approximately 8,500,000 bushels, as against an actual yield of 11,054,972 bushels for the season 1932-33.

The area from which oats were threshed for the five seasons ending with 1932-33 averaged 24 per cent. of the total area under that crop. Assuming that a similar proportion is threshed this year, the total yield of grain should be approximately 3,200,000 bushels, as against an actual yield of 5,132,183 bushels for the season 1932-33.

On a similar assumption in regard to barley, the total yield of grain should be approximately 650,000 bushels, as against an actual yield of 561,017 bushels for the season 1932-33.
