

A second and rather similar series of depressions in the middle of the month caused heavy rains over most of the North Island, especially on the 15th. On this day a very sudden and severe flood occurred in Auckland City.

The wettest period in the month commenced in a similar way on the 19th and continued till the 24th. On the 22nd the rains were general and the greater part of the country recorded very heavy falls. Portions of the eastern districts of the South Island, however, again escaped lightly. On the 19th Hokitika had the worst flood it had ever recorded. The same fate was experienced by Taranaki and parts of North Auckland on the 22nd. The heavy rains during this period were associated with a strong invasion of cold air from the south which forced up the warm and damp air over the Dominion, causing it to drop a large part of its moisture.

High pressures again ruled to the east of the Dominion throughout most of the month, but there was a considerable fall on the 15th and again on the 23rd in association with the disturbances which produced the most rainfall.

From the 8th to the 12th the Cook Islands experienced continuous gales which frequently rose to hurricane force. These were associated with two tropical cyclones of which the second was the more violent. The storms were unusually extensive, and this accounted for the persistence of the gales. Very serious damage resulted.
