

Figure 1: A circular diagram showing the distribution of data points.

Figure 1

The diagram illustrates the spatial arrangement of data points, which are distributed in a circular pattern. This arrangement is typical for certain types of data analysis, such as circular statistics or spatial data on a circular domain.

Figure 2

The diagram shows a similar distribution of data points, but with a different spatial arrangement compared to Figure 1.

This figure highlights the differences in the spatial distribution of the data points, which may be due to variations in the underlying process or the sampling method.

Figure 3

The diagram displays a third distribution of data points, showing a distinct pattern from the previous figures.

This figure provides a detailed view of the data points, showing their relative positions and the overall shape of the distribution. The points are more densely packed in certain areas, indicating a non-uniform distribution.
